PROKIT EP 110
The safety system for temporary edge protection

Product Brochure – Issue 09/2016
Content

System advantages

5 The safety system for temporary edge protection
6 Technically sound: Reliable securing of edges on building shells and formwork
8 Quickly assembled: Very few different lightweight system components and self-securing posts
10 Flexibly mounted: Numerous possibilities for a wide range of mounting situations

Components

12 PROKIT EP 110 system components
Important information

All current safety regulations and guidelines applicable in those countries where our products are used must be observed.

The images shown in this brochure feature construction sites in progress. For this reason, safety and anchor details in particular cannot always be considered as conclusive or final. These are subject to the risk assessment carried out by the contractor.

In addition, computer graphics are used which are to be understood as system representations. For ensuring a better understanding, these and the detailed illustrations shown have been partially reduced to show certain aspects. The safety installations which have possibly not been shown in these detailed descriptions must nevertheless still be available. The systems or items shown might not be available in every country.

Safety instructions and load specifications are to be strictly observed at all times. Separate structural calculations are required for any deviations from the standard design data.

The information contained herein is subject to technical changes in the interests of progress. Errors and typographical mistakes reserved.
PROKIT EP 110
The safety system for temporary edge protection

The 1.10 m high, quick to assemble PROKIT EP 110 edge protection system provides cost-effective anti-fall protection for open slab edges and numerous other leading edges.

Core components are the galvanized posts, powder-coated Side Mesh Barriers as well as the range of components for fixing the posts. With PROKIT EP 110, flexible edge protection solutions are feasible for many situations without requiring any planning effort – also for complicated structural geometries.

PROKIT EP 110 is particularly quick to assemble: the PROKIT Posts are inserted into the slab or side feet; the 260 cm long Side Mesh Barriers are then easily and simply fixed in position.

The system can be used for numerous other edge securing measures. Posts and Side Mesh Barriers are mounted using a range of clamps, e.g. also on sheet pilings. Furthermore, other accessories also allow the use on different PERI formwork and scaffolding systems; among other things, on the working platforms of the MAXIMO MXK Bracket System.

The versatility and long service life of the robust system components make the PROKIT EP 110 particularly economical. Last but not least, the increased level of safety for the users ensures accelerated working operations and a reduced risk of accidents.

Technically sound
Reliable securing of open building edges on building shells (in accordance with DIN EN 13374 Class A) and on formwork (in accordance with DIN EN 12811)

Quickly assembled
With a minimum of different, lightweight system components and self-securing posts

Flexibly mounted
Variable mounting possibilities to the building shell and PERI formwork systems
Technically sound
Reliable securing of edges on building shells and formwork

PROKIT EP 110 reliably fulfills the requirements regarding regulations involving anti-fall protection on building shells as well as the formwork.

PROKIT EP 110 provides protection against falling in accordance with Class A of DIN 13374 – e.g. at open building edges up to a 10% angle of inclination of the work surface. The 1.10 m high Side Mesh Barrier with integrated toe board corresponds to the requirements of the standard which calls for a guardrail at least 1.00 m above the working area, an intermediate guardrail as well as a toe board at least 150 mm high. In addition, the Side Mesh Barriers are also compatible with many PERI formwork and scaffolding systems.

The holding brackets on the posts have nail and screw holes already in place so that handrail boards can also be quickly and securely fixed as an alternative to the closed mesh barriers. As a result, staircases, for example, can be easily secured.

With the PERI Uni-Clamp and PERI Guardrail Post, the PROKIT Side Mesh Barrier can be used without drilling into the slab edge.

The holding brackets on the posts have nail and screw holes already in place so that handrail boards can be quickly fixed.

Stairwell areas can be secured with handrail boards which are easy to attach to the posts.
System advantages

PROKIT EP 110 provides protection on the open edges of the working platforms of this tunnel formwork.

With the help of the post extension and a second mesh barrier, the edge protection can be increased to a height of 1.75 m.

The Side Mesh Barrier is available in lengths of 0.90 m, 1.20 m and 2.40 m. The barrier is used on the MXK Bracket System for the MAXIMO Panel Formwork system as well as TRIO.
Quickly assembled
Very few different lightweight system components and self-securing posts

Installing the PROKIT EP 110 anti-fall protection is uncomplicated, very quick and safe.

The post is automatically secured when inserted into the feet after which the mesh barrier is simply fixed in position. The standard side mesh barrier is 2.60 m long and weighs less than 20 kg which ensures easy and fatigue-free handling.

The large post spacing of up to 2.40 m reduces material requirements as well as assembly time. A shorter barrier serves as compensation so that only small overlaps are necessary.
On customer request, the Side Mesh Barriers can also be powder-coated in other common RAL colours. In this way, the PROKIT anti-fall protection can also be used for advertising purposes.

**PROKIT Post PP**

The galvanized PROKIT Posts only weigh 4.3 kg. Thanks to a simple, mechanical solution, they are immediately secured without requiring any other measures when inserted into the feet. The side mesh barriers are hung over the two top brackets and subsequently fixed on the integrated toe board by means of the bottom, movable bracket.

**Side Mesh Barrier PMB**

The 260 cm long close-meshed side mesh barriers weigh less than 20 kg; shorter barriers are available for compensations. The yellow or red powder coating offers excellent corrosion protection; in addition, it has a strong signal effect for hazardous areas.
**Flexibly mounted**
Numerous possibilities for a wide range of mounting situations

For the self-securing posts, there is a range of mounting options. Depending on the requirement, there is a range of accessories available, e.g. for mounting on the slab, its front side or parapets.

PROKIT system components are extremely versatile, re-usable many times and allow the highest rates of utilization. In addition, the small number of system components simplifies the entire on-site material requirements and logistics.

**PROKIT Post PP**

Standard supports for the PROKIT post are the slab foot and side foot. In addition, clamps are available that are simply clamped on the concrete component or the sheet piling.

- **PROKIT Slab Foot PDF**
  Mounting on the slab

- **PROKIT Side Foot PSF**
  Assembly on the front side of the slab, on the wall or flight of stairs

- **Uni-Clamp PUC**
  For mounting to the front side of the slab or on a parapet

- **Sheet Piling Clamp**
  For assembly on sheet piling
Logistics and transport

A suitable pallet for storage and transport purposes is extremely practical: a total of 25 mesh barriers can be quickly stored in the Pallet EP 110 with space-saving ease – in the exact position in which they are then assembled on the slab edge. The dimensions have been optimized for transportation by truck, have the base area of a Euro pallet and are also stackable. The pallet thus ensures minimized storage space and optimized transport volume, as well as preventing any damage being caused to the Side Mesh Barriers.
## Technical Data

### Side-Mesh-Barriers PMB
- **Item no.** 117326
- **Weight kg** 19.700
- **Item no.** 126376
- **Weight kg** 9.260

**Side-Mesh-Barrier PMB 260**

**Side Mesh Barrier PMB 120**

**Technical Data**
- Maximum distance with side-mesh-barrier: PMB 260 max. 2.40 m.

### Post PP
- **Item no.** 117325
- **Weight kg** 4.270

**Post PP**
- For the fixation of the Side-Mesh-Barriers.

**Technical Data**
- Maximum distance of posts with Side-Mesh-Barrier: PMB 260 max. 2.40 m.

### Slab Foot PDF
- **Item no.** 117323
- **Weight kg** 1.530

**Slab Foot PDF**
- For assembly of a guardrail on or at edge slabs.

**Technical Data**
- Maximum distance of posts with Side-Mesh-Barrier: PMB 260 max. 2.40 m.

### Accessories
- **Item no.** 117020
- **Weight kg** 0.213
- **Item no.** 117325
- **Weight kg** 4.270

**Anchor Bolt PERI 14 x 150**

**Post PP**
